Consensus quality: 12% of reads

Consensus quality: 17764 bases at least Q20

Insert size: 17760 bases at least Q20

Insert size: 178033, sum-of-contigs

Consensus quality: 177760 bases; agarcse-fp

Quality coverage: 11.2x in Q20 bases; sum-of-contigs

Consists of 2 contigs. The true order of the pieces

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* this record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    unordered pieces.
```

```
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation man other of the overlapping clone, as we submit sequence sumisation colly a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBL; Sww., SWISSEROT; Tr., TERMEL; WD., WORMPEP; Information of the clone and be found at the control of the clone and be found as the control of the clone being a YAC.

                                                                                                                                                                                                                                                                                                                                                             NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length 174835

Direct Submission

Submitted (09-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 9, 2002 this sequence version replaced gi:23096537.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas and whole genome shotgun sequencing reads assembled using Atlas assembly (a 'contig-seaffold'). Within each contig-seaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence ontigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence ontygs will be indicated in the feature

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        FEATURES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Direct Submission

Direct Submission

Submitted (15-NOV-2002) Human Genome Sequencing Center, Department Submitted (15-NOV-2002) Human Genetics, Baylor College of Medicine, One Daylor Plaza, Houston, TX 77030, USA on Nov 6, 2002 this sequence version replaced gi:23097379.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the fature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.

NOTE: This is a "working draft" sequence. It currently consists of 9 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                  The present sequence encodes a Candida albicans protein. The specification describes genes CaRRA472, CaDRA69, ICADRS27, 2CaDRS27, 2CaLCA4, CaNL260, and CaDR361. These genes are essential for carLO24, CaNL260, and CaDR361. These genes are essential for Candida albicans genes and their derived proteins are used to screen compounds ablicans genes and their derived proteins are used to screen compounds antibugal activity. The proteins are also used to generate a protective antibody response against fungal infections in mammals. The Candida albicans proteins and genes, and their antibodies, are used for diagnosing fungal infections, specifically C. albicans (in standard amplification, hybridisation or immunological assays, and for studying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     40

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to novel methods for constructing fungal strains useful for identification and validation of gene products as targets for therapeutic agents, for creating a collection of identified essential genes, and screening assays for the discovery of new drugs. The invention provides the GRACE (gene replacement and conditional expression) method for the construction of mutant organisms referred to as GRACE strains of the organism. The invention can be applied to any organism, particularly a pathogenic fungus e.g. Candida albicans, Aspergillus funigatus and Cryptococcus neoformans. The methods are useful to identify agents that may be used in the treatment of fungal infections. AAS23412 represent C. albicans essential genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 MetSerAspileAspleAspAsnValLeuAsnLeuGluGluGluGluGluTyrGluLeuGly

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to constructing (MI) a strain of diploid fungal cells in which both alleles of a gene are modified, comprising modifying one allele by insertion or replacement by a cassette having an expressible selectable marker and modifying other allele by recombination, of a promoter replacement fragment with a heterologous promoter, so that expression of the second allele is regulated by the promoter. (MI) is useful for constructing a strain of diploid fungal cells in which both alleles of a gene are modified. The diploid fungal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           targets

cells having both alleles modified are useful for identifying a gene that is essential to the survival or growth of a fungus, a gene that contributes to the virulence and/or pathogenicity of a fungus, a gene that contributes to the virulence of a diploid fungus to an artifuugal agent that inhibits the growth of a fungus and refungal agent that inhibits the growth of a diploid fungus and for identifying a therapeutic agent for treatment of a mammalian disease. (M1) is useful for identifying a compound which modilates the activity of a gene product, preferably enzymatic activity, carbon compound catabolism, biosynthetic, transporter, transcriptional, translational, signal transduction, DNA replication and cell division activity. The method is useful for identifying a compound having the ability to inhibit growth or proliferation of C. albicans cells and for treatms infection by C. albicans. The present sequence is that of an essential Candida albicans gene used in the method of the invention.

Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240

                                                                                                                                                                                                                                                              The present sequence represents a probe for DNA encoding a Candida albicans protein. The specification describes genes CaDRA472, CaDR489, ICADR527, CaPL024, CaNL260, and CaDR361. These genes are essential for survival, and so are good targets for antifungal agents. The Candida albicans genes and their derived proteins are used to screen compounds for the ability to inhibit the activity of the protein, i.e. for antifungal activity. The proteins are also used to generate a protective antibody response against fungal infections in mammals. The candida albicans proteins and genes, and their antibodes, are used for diagnosing fungal infections, specifically C. albicans (in standard amplification, hybridisation or immunological assays, and for studying

The invention relates to novel purified or isolated nucleic acids of essential genes of Aspergillus fumigatus. The isolated nucleic acids of the invention are used to treat or prevent infections by a pathogenic corganism such as A. fumigatus, to treat a non-infections by abathogenic corganism such as A. fumigatus, to treat a non-infection disease in a subject (e.g. cancer), to prevent or inhibit formation on a surface of a blofilm comprising A. fumigatus. The polynucleotides are useful for expressing recombinant protein for characterisation, screening or expressing recombinant protein for characterisation, screening or expressing incomprising with the DNA sequence of A. funigatus to identify duplicated genes or paralogues having the same or corganisms invede or reside, for comparing with the DNA sequence of or their related or distant pathogenic organisms to identify similar biochemical activity and/or function, for comparing with DNA corporates of other related or distant pathogenic organisms for attachment to a nucleic acid array for examination of expression patterns, for radialng anti-protein artipodies, as an organism to radial activity and polynucleotides encoding the other protein with which binding occurs or to identify inhibitors of the binding correct organism invade or reside, and for identifying polynucleotides encoding the other protein corganism invade or reside, as a marker for content or the protein in biological fluids, as a marker for content or the polypeptides or to elect the case or virulence organism. This solvential which pathogenic organism invade or reside, and expension organism invade or veside, and expension organism invade or veside, and marker for factors. This polynucleotides expenses the expression organism invade or veside, and marker for factors.
                                                                                                                                                                                                                                                                                                                Fungicide, cytostatic, essential gene, Aspergillus fumigatus; infection; cancer; contamination; biofilm; antibody; immune response; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              β
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New purified or isolated nucleic acids of essential genes of
Aspergillus fumigatus, useful for treating or preventing infections
A. fumigatus, or for treating a non-infectious disease in a subject
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Lemieux

The invention relates to novel purified or isolated nucleic acids of essential genes of Aspergillus fumigatus. The isolated nucleic acids of the invention are used to treat a non-infectious by a pathogenic organism such as A. fumigatus, to treat a non-infectious disease in a subject (e.g. cancer), to prevent or contain contamination of an object by A. fumigatus. The polynucleotides are useful for expressing recombinant protein for characterisation, screening or cherapeutic use, as markers for host tissues in which the pathogenic organisms invade or reside, for comparing with the DNA sequence of A. fumigatus to identify duplicated genes or paralogues having the same or similar biochemical activity and/or function, for comparing with DNA sequences of other related or distant pathogenic organisms to identify optential or virulence genes, for selecting and making oligomers for attachment to a nucleic acid array for examination of expression patterns, for raising anti-protein artibodies, as an of expression patterns, for raising anti-protein artibodies, as an antigen to raise anti-DNA antibodies or to elicit another immune response, and identifying polynucleotides encoding the other protein with which binding occurs or to identify inhibitors of the binding cure action. The polypeptides may be used to raise antibodies or to elicit immune response, as a reagent in assays designed to quantitatively determine levels of the protein invade or reside, and to isolate correlative receptors or ligands in the case or virulence factors. This polynucleotide sequence represents one of the essential
or for treating a non-infectious disease in a subject
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 3863 BP; 983 A; 980 C; 970 G; 930 T; 0 other;

The invention relates to novel purified or isolated nucleic acids of essential genes of Aspergillus fundatus. The isolated nucleic acids of the invention are used to treat a non-infectious by a pathogenic organism such as A. fundatus, to treat a non-infectious disease in a subject (e.g. cancer), to prevent or contain contamination of an object organism such as A. fundatus, or to prevent or inhibit formation on a surface of a biofilm comprising A. fundatus. The polynuclectides are useful for expressing recombinant protein for characterisation, screening or therapeutic use, as markers for host tissues in which the pathogenic organisms invade or reside, for comparing with the DNA sequence of A. funigatus to identify duplicated genes or paralogues having the same or similar biochemical activity and/or function, for comparing with DNA sequences of other related or distant pathogenic organisms to identify potential or virulence genes, for selecting and sequences of other related or distant pathogenic organisms to identify protein antibodies, as an axingen to raise anti-DNA antibodies or to elicit another immune response, and for identifying polynucleotides encoding the other protein antipodie, as a mineraction. The polypeptides may be used to raise antibodies or to elicit immune response, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, as a marker for host tissues in which pathogenic organism invade or reside, and to isolate correlative receptors or ligands in the case or virulence to sections. This polymulectice sequence represents one of the essential
                                                                                                                                                                                                                                                   Pungicide, cytostatic, essential gene, Aspergillus fumigatus, infection,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAX20248 to AAX20402 represent polynucleotide sequences isolated from Borrella burgdorferi (Bb). Products derived from Bb can be used for the detection, diagnosis, characterization, prevention and therapy of Bb infections, e.g. Lywe disease. They can also be used for the production of biosynthetic products, e.g. enzymes. Borrella belongs to a family of motile, spiral-shaped bacteria called spirochetes Spirochetes are pathogenic in humans and Borrella causes epidemic andemnic relapsing fever, and Lyme borreliosis, more commonly known as
Borrelia burgdorferi, spirochete, bacterium, pathogen, Lyme disease, epidemic relapsing fever; Lyme borreliosis; infection, diagnosis, characterisation, detection, ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated Borrelia burgdorferi nucleic acids - used to develop products for the detection, diagnosis, characterisation, prevention and therapy of infections, particularly Lyme disease

                                                                                                                                                                                                                                                                                                                                                                                                                     8888888888
                                                                                                                                                                                                                                                                                                                                 Š
                                                                                                                                                                                                                                                                             ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to constructing (M1) a strain of diploid fungal cells in which both alleles of a gene are modified, comprising modifying one allele by insertion or replacement by assette having an expressible selectable marker and modifying other allele by recombination, of a promoter replacement fragment with a heterologous recombination, of a promoter replacement fragment with a heterologous promoter; so that expression of the second allele is regulated by the promoter. (M1) is useful for constructing a strain of diploid fungal cells in which both alleles of a gene are useful for identifying a gene that cells in which both alleles of a gene are useful for identifying a gene that is essential to the survival or growth of a fungus, a gene that contributes to the virulence and/or pathogenicity of a fungus, a gene that contributes to the resistance of a diploid fungus to an antifungal agent that inhibits the growth of a diploid fungus and for identifying a therapeutic agent for treatment of a mammalian disease. (M1) is useful for identifying a compound which modulates the cutivity of a gene product, preferably enzymatic activity, carbon compound actabolism, blosynthetic, transporter, transcriptional, translational, signal transduction, DNA replication and cell division

activity. The method is useful for identifying a compound having the ability to inhibit growth or proliferation of C. albicans cells and for treating infection by C. albicans. The present sequence is that of a PCR primer used in the method of the invention.

Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the Buropean Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                essential gene; Aspergillus fumigatus; infection; biofilm; antibody; immune response; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to novel purified or isolated nucleic acids of essential genes of Aspergillus fumigatus. The isolated nucleic acids of the invention are used to treat or prevent infections by a pathogenic organism such as A. fumigatus, to treat a non-infectious disease in a subject (e.g. cancer), to prevent or contain contamination of an object
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ል

by A. fumigatus, or to prevent or inhibit formation on a surface of a biofilm comprising A. fumigatus. The polynucleotides are useful for expressing recombinant protein for characterisation, screening or therapeutic use, as markers for host tissues in which the pathogenic organisms invade or reside, for comparing with the DNA sequence of A. funitar biochemical activity and/or function, for comparing with DNA sequences of other related or distant pathogenic organisms to identify optential orthologous essential or virulence genes, for selecting and making oligomers for attachment to a nucleic acid array for examination of expression patterns, for raising anti-protein antibodies, as an artising to raise anti-DNA antibodies or to elicit another immune response, and for identifying polymucleotides encoding the other protein with which binding occurs or to identify inhibitors of the binding interaction. The polypeptides may be used to raise antibodies or to elicit immune response, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, as a marker for isolate correlative receptors or liquads in the case or virulence factors. This polymucleotide sequence represents one of the essential

Sequence 2601 BP; 671 A; 675 C; 677 G; 578 T; 0 other;

Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject e.g. arthritis and cancer -

Claim 1; Page 809; 1963pp; English.

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of packducing the nucleotides. Concleotide against the polypeptides, methods of detecting the nucleotides or polypeptides of the invention. Although novel, many of the bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby optential therapeutic applications. The polypeptides of the invention may have various activities, including cytokine, or known proteins, thereby care various activities, including cytokine, cell proliferation or cell differentiation activity; activity, issue growth activity; activity, activities, haemostatic, thrombotic or chemothatory activity; activities, haemostatic, thrombotic or chemothatory activity; activities, haemostatic, thrombotic or chemothatory activity; activities, propaptides and nucleotides of the invention are useful for preventing, treating or metastasis.

Conditions, e.g., by protein or gene therapy. Such conditions include conditions, e.g., by protein or gene therapy. Such conditions include conditions, e.g., by protein or gene therapy. Such conditions of promote wound creating stowth. Polypeptides involved with tissue regeneration and creating stowth. Polypeptides involved with tissue regeneration and creating stowth. Polypeptides involved with tissue regeneration and fungal infections in addition to immune disorders to remaing (e.g., of burns, indisorders (e.g., ostubing of promote cell growth. For example, such polypeptides may be used in the treatment of viral, comparation and fungal infections in addition to immune cell growth. For example, such poly

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to polynucleotides (AAKS1456-AAKS3435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
